Welcome to MAYA Data Privacy Limited!

MAYA is a pioneering Deep Tech startup leveraging **Artificial Intelligence (AI)** to help mid and large enterprises navigate the complexities of data usage while ensuring compliance with critical regulations such as the **AI Act**, **GDPR**, **NIS2**, and **DORA**. By focusing on secure data utilization, MAYA empowers organizations to maximize their data's potential within regulatory boundaries.

Organizations often face significant challenges when managing personal data mixed with insightful business data. **MAYA** provides AI-driven solutions that not only curate data but also anonymize it as needed, enabling secure and compliant operations across various applications. The cornerstone of MAYA's offerings is **AppSafe**, a powerful product designed to integrate seamlessly into cloud and hybrid environments, utilizing on-edge compute with privacy-enhancing technologies.

AppSafe can transform data across diverse sources, including file storage solutions like **SharePoint**, **Azure Blobs**, and **AWS S3 Buckets**, as well as databases such as **Oracle**, **HANA**, and **Postgres**. The solution also supports **API-based integrations**, offering flexibility to meet the diverse data needs of enterprises.

Key Services

AppSafe

- **Description**:AppSafe is designed for comprehensive data anonymization across various platforms and applications, making it a versatile tool for securing data in diverse environments.
- **Features**:

  Data Source Connection: Setting up connections with a variety of data sources, including databases, file storage, and APIs.
  Auto-Detection: Automatically detect and categorize personally identifiable and sensitive information like Name, Telephone Number, Email id and Dates.
  Manual Configuration: Gives the user the option to configure manually the type of data transformations for different tables and columns in multiple databases.
  AI Generated Anonymization: Gives the user the ability to anonymize data assisted by AI. This allows users to anonymize large data sets within a very short time.
  File Upload: Gives the user the option to define the anonymizations in by uploading an .xls file.
  Consistent Data Transformation: App safe allows the consistency of the anonymized data within or across Projects using the unique feature of collaboration groups.

FileSafe

- **Description**: FileSafe anonymizes data within files, such as **CSV** and **XLS** formats, ensuring that personal and sensitive information is secured.
- **Modes**:

  Manual Anonymization:
  Purpose: Allows users to manually remove sensitive data from their files, ensuring data confidentiality.
  Steps:; Upload file(s) from your computer or use demo files provided by MAYA.; Manually identify and anonymize sensitive data.
  AI-Powered Anonymization:
  Purpose: Provides an automated solution to identify and anonymize Personally Identifiable Information (PII) within files.

Steps:; Upload CSV or XLS files.; MAYA's AI system identifies PII and applies anonymization protocols to protect data integrity and privacy.

AI-Safe

- **Description**: AI-Safe ensures the security of sensitive data when interacting with AI models like **ChatGPT** by anonymizing inputs before they are processed.
- **Purpose**: Enables secure AI interactions by anonymizing personal data and preventing any compromise of user privacy.

Platform Features

User Authentication

- **Registration**:

  Users can register by providing their email, first name, last name, mobile number, organization details, and password.

- **Login**:

  Users can log in using their email and password, supported by CAPTCHA verification.

- **Forgot Password**:

  Utilizes **JWT tokens** for secure password resets.

Join MAYA Data Privacy Limited today and experience the future of secure and compliant data utilization!

User Roles

Maya Data Privacy offers robust user management with a structured hierarchy of roles, each tailored to specific access and permissions within the system. These roles ensure secure, organized, and efficient access control.

Role Details

Role Name	Access Details
Super Admin	Holds full control of the system. Has unrestricted permissions across areas of system settings and database access.
Admin	Full access to the assigned organization, with the ability to manage and configure all organization-specific settings and resources.
Normal User	Provides access to most features with a few restrictions:
	- Cannot create or delete configuration sets.
	- Cannot modify user roles for specific bypasses (reserved for Admin).
	- **AI Safe:** Full access to the AI Safe feature.
Public User	Typically a test or guest user. Can explore File Safe only, with no additional parameters.
